

GLMCL Remote Controller for GL series RGB lights

GLMCL is a hand-held remote control for Elipta Plug&Play RGB colour changing lights.

PHYSICAL DATA

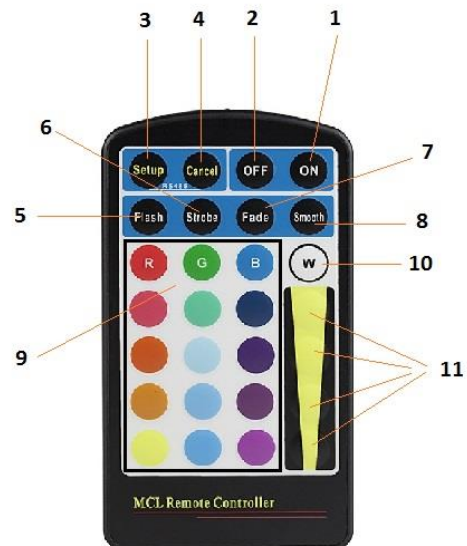

Hand-held remote control measuring 50mm x 92mm x 6mm

ELECTRICAL DATA

Powered from a single 3v Lithium CR2025 button cell.

OPERATION

To use the remote control, install RGB lights according to instructions supplied with them and switch on the supply circuit. Position the remote control within about 1.5m in direct line-of-sight to the lens(es) of the light(s) being controlled. Press button 1 to turn on the light, and select the desired function from the table below. Note that it is not possible to synchronize the colour changing of multiple lights using this system. Each light will run through the programmed sequence on its own merit. If the light is turned off at the supply rather than using button 2 the light will retain the same mode when power is re-applied without the need to use the controller.

COMPLIANCE & WARRANTY

- 2 Year warranty
- CE / RoHS Compliant

Button	Function
1	ON – Switches lights on
2	OFF – Switches lights off
3 & 4	Not used
5	Fast colour change – switches between random colours
