Energy Rating

- A** 12v L.E.D. LAMPS
- B** HALOGEN Powersavers
- C** 12v HALOGEN LAMPS

Lamp comparison		
Power saver	Standard	I.e.d. lamp
	20w 36°	3w warm white
20w 36°	35w 36°	5w warm white
35w 36°	50w 36°	5w white

These IP68 underwater lights are versatile, safe 12v accent lights for wet locations using an MR16 50w halogen lamp underwater or a maximum of 35w above water. Low energy, long life options include 3w and 5w I.e.d. lamps and **Powersaver** energy-efficient halogen lamps: a 50w **Powersaver** is the equivalent of a 75w standard halogen lamp. They feature stainless steel screw fixings and robust construction in cast brass or 316 grade stainless steel, providing more certain location in water than lighter aluminium or plastic underwater lights. A 6m cable facilitates ease of connection to a remote transformer without use of underwater joints. Mounting options include a base mount, spike mount and 25cm extended stem. Glare shield models are available in black powder-coated or sandblasted brass. **Atlantus Brass** weathers to an ochre colour to blend with stone, gravel and other landscape materials. **Black** models are powder-coated brass for discrete location combined with longevity and the weight for firm location in black-lined water features. **Neptune Stainless** in 316 grade stainless steel combines style and durability in water features with decorative linings or stainless steel construction.

Neptune IP68 recessed lights in brass and 316 stainless steel are intended for installation in wet areas using round or square recess niche and stainless steel sleeve. The body of the underwater light is screwed into the recess niche with the 2 screws supplied before fitting the gasket, lens and front plate. The niche and sleeve may be installed during paving or wall construction, with provision of conduit to allow the 6m cable to be connected to a remote transformer position later. They are ideal for fixed uplighting applications such as feature planting, small trees, columns, gate pillars and facades. **Neptune Recessed** lights are supplied as separately packaged underwater light and recess niche for on-site assembly. *Maximum halogen lamp power : 35w.*
