* Supplied as 2 Microspots & conversion kit for self assembly		
** Supplied as a kit to retrofit to 2 Microspot spike spotlights		

Microspot Spike is a miniature 12v adjustable spike spotlight available in 316 stainless steel, natural copper or black powder-coated aluminium. It is intended for use in containers, urns and small planting pockets using an MR11 20w halogen reflector lamp or low energy 3w warm white l.e.d. lamp which is equivalent in output to a 20w halogen lamp. **Microspot Spike** is fitted with a 18cm slim rod spike fitted to the adjustable knuckle joint; this may be unscrewed and replaced with the optional 50cm extended spike mount without having to rewire the light: the 50cm extended spike is intended for use amongst taller planting or to cater for seasonal fluctuations in planting height. **E4011** 35mm glare louvre is an option for glare limitation near seating areas or viewpoints. **Microspot Spike** is also available in a twin spike spotlight version, supplied in kit form for on-site assembly

Microspot Wall is a miniature 12v spotlight providing adjustable spotlighting for small features or grazing down pillars and pergola piers to emphasise structure: it accepts a 12v MR11 20w halogen lamp or 3w l.e.d. lamp. The front bezel unscrews for easy lamp changing or to fit a **E4011** honeycomb glare louvre. The flush lens is easier to clean periodically. The base mount incorporates rear cable entry into a termination space and rotates on the back plate to achieve exact positioning.
